9. Late Reduction - Event vs Lifecycle

Event rate and lifecycle rate remain separate. The consolidated event rate is 72.39% and the lifecycle rate is 100.00%.

10. Response Delay

Missing responses remain UNRESOLVED and are never replaced by lifecycle duration.

11. Position Health

Worst and dominant health are aggregated once per lifecycle. Candle-level traces remain secondary diagnostics.

12. Deterioration

Maximum deterioration and first HIGH/CRITICAL timestamps are descriptive and do not trigger actions.

13. Component Analysis

Only persisted V1 components are used. Weights remain frozen.

14. Giveback Analysis

Giveback is observed independently from the aggregate score and is not converted into an operational rule.

15. Cross-Period Stability

CRITICAL LIFECYCLE REACH RATE	75.0000	50.0000	100.0000	50.0000

16. Score Stability

SHIFTED. With fewer than four lifecycle observations or two periods, the result is INSUFFICIENT_SAMPLE.

17. Outlier / Concentration Analysis

No lifecycle is removed automatically. Sensitivity results remain in the structured JSON and Markdown report.
